# TRINITY MINIMAL SINUS LIFT SET VON DR. PEDRO MOURA

TRINITY MINIMAL SINUS LIFT SET BY DR. PEDRO MOURA

TRINITY MINIMAL SINUS LIFT SET SELON DR. PEDRO MOURA

**DR. PEDRO MOURA, PORTO | PORTUGAL**

Dr. Pedro Moura graduated in Clinical Psychology (ISCS-N, 2002) and Dental Sciences (2008 ISCS-N) and post-graduated in implantology and periodontology.

He has founded and currently is the pedagogic coordinator of Foramen Dental Education, a dental training center that has been continuously training dentists in all areas of dentistry since 2014. He has organized multiple courses as a keynote speaker in several areas of dental surgery including autologous grafts, digital dentistry, sinus lift, full arch, mucogingival, etc.

Lately, all of his time is devoted to directing a Master in Surgery- Clinical Residency (Universidad Miguel Cervantes and Foramen Dental Education) in which he leads 16 residents for 10 months.

He is a Board Member of SOPIO - Portuguese society of implantology and osteointegration.

He lectures regularly at congresses both nationally and internationally. His clinical practice is limited to surgery.

He loves spending time with his kids and enjoying the good things in life.

## Sinus-Lift Kürette | TRInity 1

Sinus-Lift curette | TRInity 1  
Sinus-Lift curette | TRInity 1

**F-line** SL

Das Instrument wird verwendet, um den Sinusboden zu erreichen. Die Rückseite dient dem Erreich der medialen Wand.

The instrument is used to reach the sinus floor. The back is used to reach the medial wall.

L'instrument est utilisé pour atteindre le plancher du sinus. L'arrière sert à atteindre le mur médian.

Titanium, sharp  
Titane, tranchante

## Sinus-Lift Mikro-Schaber | TRInity 2

Sinus-Lift micro-scraper | TRInity 2  
Sinus-Lift micro-grattoir | TRInity 2

**F-line** SL

Für die Membranablösung in engen Bereichen. Beide Enden sind scharf und ermöglichen eine taktile Sinus-Elevation.

For membrane detachment in narrow areas. Both ends are sharp and enable tactile sinus elevation.

Pour le décollage de la membrane dans des zones étroites. Les deux extrémités sont tranchantes et permettent une élévation si- nusoidale tactile.
